

NEW

New Frontier of Absolute Protection – Specifically Designed for Show Jumping.

Extended protective surfaces of Gel and Carbon combined with a New Innovative Shape for Truly Absolute Protection.

Wider, Stronger, Safer: Veredus developed the concept of total protection by extending the protective surface of the gel and carbon from the flexor tendon to the fetlock in an innovative inverted Y shape. Creating the ultimate combination of the Vento line and new shape for exceptional degree of breathability, comfort and protection.

Carbon is the protective and ultralight material par excellence. Its use makes the shell highly resistant to shocks, especially in the areas of the flexor tendon and fetlock, which are more exposed to risk of impact. Nitrexgel's 3mm membrane is able to dissipate impacts by over 40%, ensuring additional safety and exceptional comfort.

- Wider and more extensive carbon and gel protection
- Greater support for the fetlock
- Double ventilation
- Aerox micro-perforated neoprene
- 3D mesh ducted fabric
- Elastic straps with quick release tips
- Anatomic shell
- **Rear boot** features 4 hole tips for more precise adjustment
- Rico Test RCT certified protection

CARBON GEL VENTO™

BY MARCUS EHNING

All the benefits of our Carbon Gel Vento boots, with the addition of a Techno Sheepskin full lining, a man-made synthetic sheepskin that washes easily and dries quickly. Its loose, soft, wide knit releases trapped sand easily, reducing the risk of rubs. Heat released from the horse's leg passes into 3D mesh ducts to be carried away.

The shell is made of flexible and strong dual density TPU. Extra protection in the flexor tendon area is provided by the anti-shock carbon strike zone and Nitrexgel™, which provides extra protection against strikes and bruising.

The elastic straps with quick release tips are easy to use, provide great fit, and are tested to withstand 5000 hooking/unhooking cycles.

New Frontier of Absolute Protection – Ideal for Multiple Disciplines.

Extended protective surfaces and EVA™ Double Density Shell combined with a New Innovative Shape for Total Protection.

Wider, Stronger, Safer: Features a larger protective surface that covers the entire area from the flexor tendon to the fetlock in an innovative inverted Y shape.

The plastic of the shell has different densities and characteristics depending on the areas to be protected, more resistant in the areas of the flexor tendon and inside of fetlock that are more at risk of accidental impacts.

The anatomical shape guarantees maximum comfort and perfect positioning on the horse's leg. The double density shell is combined with EVA™, a flexible, elastic, anti-shock plastic material – Creating truly absolute protection and unique comfort.

- Double Density anatomic shell
- Wider and extended EVA protection
- Greater support for the fetlock
- Elastic straps
- **Rear boot** features 4 hole tips for more precise adjustment
- Quick release tips

FOUR HOLE QUICK RELEASE TIP

NEW

Show jumping front tendon and rear fetlock boots with double ventilation.

The heat that is released from the horse's leg passes through the micro-perforated neoprene layer and is distributed in the 3D mesh ducted fabric. Fresh air enters through the air inlets and directs the heat upwards to the outlet grid. The ventilation is therefore both horizontal and vertical. The protection of the front tendons and rear fetlock are guaranteed by a shock absorber film in EVA.

- Double ventilation
- Aerox micro-perforated neoprene
- 3D mesh ducted fabric
- Fetlock and tendon protection in EVA
- Quick release tips
- Double density anatomic shell

Especially designed for the rigors of cross country, with enhanced strike protection and ventilation that will stand up to any obstacle while keeping the horse's leg cool.

The E-Vento provides double ventilation to keep the tendons cool - Air is tunnelled through inlets as the horse moves, which directs accumulated body heat outwards through microperforated Aerox® neoprene and into 3D mesh ducted fabric to be carried away.

Highly protective pads made of polyurethane foam reduce shock felt from any impacts while being waterproof, so they will stay dry and not become waterlogged regardless of weather and terrain.

Despite offering extremely robust protection, these boots are lightweight, allowing for greater freedom of movement and flexibility.

What is Magnetic Therapy?

Magnetic Therapy is a non-invasive drug free treatment of injuries. The magnetic fields stimulate blood flow and at the same time also help with cellular growth and ligaments repair. Because of their polarity, magnets draw blood to the area that they are placed in.

How does it work?

The cells, whose fundamental task is the production of energy, have an electric voltage that feeds a coordinated activity on a level of tissues and organs. In a situation of internal or external injury, cell activity is compromised and the consequences are inflammation, pain, etc. The creation of a magnetic field by means of permanently magnetized NEODYMIUM plates having several polarities helps restore the biological energy, slowing down the physiological deterioration of tissues.

Effects of magnetic fields:

The magnetic fields favor and facilitate lymphatic and blood microcirculation, the change and use of nutrient substances by the cells, the natural biological defense system and the elimination of metabolic waste matter. Moreover, the magnetic fields provide significant benefits in all inflammatory processes which are often accompanied by pain. The benefit is obtained through a reduction of the inflammatory process and, at the same time, an analgesic action with respect to the tissue nerve fibers.

Indications:

Magnetotherapy also stimulates vasodilatation, i.e. increases the blood flow to the injured part, speeds up the elimination of dead cells and toxins, relaxes the muscles and reduces swelling. The static magnetic energy also stimulates the production of ELASTIN and COLLAGEN, which are indispensable elements for the reconstruction of tissues.

Please consult your veterinarian before beginning any magnetic therapy treatment.
